

## Uptime service Pingdom launches new control panel

*Pingdom, the site uptime monitoring service, recently launched their new in-house-developed control panel. At the same time, they also announced a 70% discount lasting all through July.*

Pingdom.com, a business-oriented service for monitoring uptime and response times for online services such as websites, email servers and FTP servers, announced last week that they have launched a new control panel, completely developed in house.

The new control panel, dubbed Pingdom Panel, has been custom-made by Pingdom's internal development team to provide a powerful but easy-to-use interface to manage the different checks and statistics the service provides.

In connection with the launch of the new Pingdom control panel, Pingdom offers a time-limited 70% discount on joining the service. The offer lasts all through July.

Businesses are often unaware of problems with their online services, and even less aware of response time issues. By monitoring from every continent, Pingdom gives businesses plenty of data to study for example the response time and availability of their website. Pingdom also notifies the site owners via email and SMS when it detects a problem.

### **About Pingdom:**

Pingdom is an uptime monitoring service with a global approach, monitoring websites and servers from every continent to ensure the best reliability and accuracy possible. Find out more at [www.pingdom.com](http://www.pingdom.com).
