

Pingdom meets milestone with 100,000 checks per hour

With customers such as Skype, Nokia and AdBrite, the uptime monitoring company Pingdom continues to grow. The company now performs more than 2.4 million checks per day.

The uptime monitoring company Pingdom is now performing more than 2.4 million checks per day, or more than 100,000 checks per hour. These checks are performed by Pingdom's global network of monitoring servers, where each check verifies that a customer server or website is available on the Internet. When an error is detected, alerts can be sent out, and all monitoring data is always available to the customer in the Pingdom control panel.

"Uptime monitoring companies in general provide a valuable service that helps their customers stay aware of any site issues," says Sam Nurmi, founder and CEO of Pingdom. "However, costs for detailed monitoring are often prohibitive, so we've done our best to make it affordable to set up a large number of individual checks. With more checks at their disposal, customers can monitor every aspect of their infrastructure. The response we have received is that this is really helping them provide a better service."

Pingdom is growing fast and has customers such as Skype, Nokia, Feedburner, Alexa Internet, AdBrite and iStockPhoto to name just a few. As of December 2006, the company had customers in 126 countries.

A large goal for Pingdom has been to introduce a level of simplicity to the often complex uptime monitoring market. This focus on simplicity ranges from a pricing model that makes it very easy for customers to calculate the cost of using Pingdom, to an easy-to-use web-based control panel where customers set up and control their checks.
